SEASONAL FORECAST OUTLOOK for North Africa *JULY-AUGUST-SEPTEMBER 2016 issued June 2016*

Seasonal forecast outlook for North Africa RCC domain is based on the ARPEGE-Climat coupled model output jointly with seasonal forecasts issued from ECMWF, UK Met-Office and IRI. The ARPEGE-Climat v5.2 coupled model is running at MAROC-METEO super-computer each month to elaborate seasonal ensemble forecasts. Sets of 27 forecasts are initialized by 9 atmospheric analysis, taken from ECMWF database, and 3 ocean analysis (PSY2G3R3) issued from MERCATOR center.

We also try to exploit the sources of predictability contained in the sea surface temperature (SST) by statistical methods when it is possible. We note, however, that this influence is not the same from one region to another or throughout all the year.

NB: All dynamical forecasts are experimental.

Synthesis:

The analysis of current circulation, sea surface temperature and dynamical/statistical models outputs show probably for July-August-September 2016 for temperature:

- ✚ Above normal conditions are likely inside and eastern Morocco and normal elsewhere on the country
- ✚ Above normal conditions are likely over Algeria, Tunisia, Libya and Egypt

NB: Precipitation forecasts are given for September to May (the main rainy season). Temperature forecasts are given for January to December.

Tables summarizing seasonal forecast for July-August-September 2016

1. Seasonal temperature forecast

Model/multi-model	Morocco	Algeria	Tunisia	Libya	Egypt
<i>ARPEGE-Climat</i>		 S  N		 SW  E	
<i>ECMWF</i>	 Else  W				
<i>UK Met-Office</i>	 Inside/E  Else				
<i>IRI</i>					
<i>Statistical model</i>					
Synthesis	Probably above normal conditions inside and eastern Morocco	Probably above normal conditions	Probably above normal conditions	Probably above normal conditions	Probably above normal conditions
