SEASONAL FORECAST OUTLOOK for North Africa

January-February-March 2017 issued December 2016

Seasonal forecast outlook for North Africa RCC domain is based on the ARPEGE-Climat coupled model output jointly with seasonal forecasts issued from ECMWF, UK Met-Office and IRI. The ARPEGE-Climat v5.2 coupled model is running at MAROC-METEO super-computer each month to elaborate seasonal ensemble forecasts. Sets of 27 forecasts are initialized by 9 atmospheric analysis, taken from ECMWF database, and 3 ocean analysis (PSY2G3R3) issued from MERCATOR center.

Sources of predictability contained in the sea surface temperatures (SST) are also explored when possible. Note, however, that this influence is not the same from one region to another or throughout all the year.

NB: All seasonal forecasts are experimental.

Synthesis:

The analysis of models outputs show probably for January –February-March 2017:

- For temperature:
 - ✚ Above normal conditions over Morocco, Algeria, Tunisia, Libya and Egypt.
- For precipitation:
 - ✚ No special scenario over North African countries.

NB: Precipitation forecasts are given for September to May (the main rainy season). Temperature forecasts are given for January to December.

Tables summarizing seasonal forecast for January-February-March 2017

1. Seasonal temperature forecast

Model/multi-model	Morocco	Algeria	Tunisia	Libya	Egypt
<i>ARPEGE-Climat</i>					
<i>ECMWF</i>					
<i>UK Met-Office</i>					
<i>IRI</i>					
Synthesis	Probably above normal conditions	Probably above normal conditions	Probably above normal conditions	Probably above normal conditions	Probably above normal conditions
