SEASONAL FORECAST OUTLOOK BULLETIN FOR March-April-May 2014 IN NORTH AFRICA

Seasonal forecast outlook for North Africa RCC domain is based on the ARPEGE-Climat coupled model output jointly with seasonal forecasts issued from ECMWF, UK Met-Office and IRI.

The ARPEGE-Climat coupled model is running at Maroc-Meteo super-computer each month to elaborate seasonal ensemble forecasts. Sets of 27 forecasts are initialized by 9 atmospheric analysis, taken from ECMWF database, and 3 ocean analysis (PSY2G3R3) issued from MERCATOR center.

PS: 1. We note that seasonal forecasts issued from all models are given in probabilistic form

2. A new version of ARPEGE-Climat model with high and variable resolution (varies between 55km and ~100km over North Africa RCC domain) is operational at Maroc-Météo from January 2014

Synthesis:

The analysis of SST anomalies, knowledge of climate variability of North Africa and seasonal forecast issued from different models for MAM 2014 show probably:

- For temperature:
 - ✚ Normal to above normal conditions over Morocco
 - ✚ Above normal conditions over Algeria, Tunisia, Libya and Egypt

**Tables summarizing seasonal forecast for March-April-Mai 2014
in North Africa**

1. Seasonal temperatures forecast

Model/multi-model	Morocco	Algeria	Tunisia	Libya	Egypt
<i>ARPEGE-Climat</i>					
<i>ECMWF</i>	 Coast  Elsewhere				
<i>UK Met-Office</i>	 N&S  Elsewhere				
<i>IRI</i>					
Synthesis	Probably normal to above normal conditions	Probably above normal conditions	Probably Above normal conditions	Probably Above normal conditions	Probably above normal conditions
