

SEASONAL FORECAST OUTLOOK FOR NORTH AFRICA

May-June-July 2025 issued on April 2025

Seasonal forecast outlook for North Africa RCC domain is based on several dynamical and statistical models in addition to the influence of some specific modes of teleconnection on global and regional scale. We also try to exploit the sources of predictability contained in the sea surface temperature (SST) by statistical methods when it is possible. We note, however, that this influence is not the same from one region to another or throughout all the year.

NB:

- 1. New:** Multi-model probabilistic forecasts from Copernicus C3S and WMO LC-LRFMME
- 2.** All dynamical forecasts are experimental.

SYNTHESIS

The analysis of current circulation, sea surface temperature, ENSO phenomenon and dynamical/statistical models outputs show for May-June-July 2025:

- **For temperature:**

- ✚ Probably above normal conditions over Morocco, Algeria, Tunisia, Libya and Egypt.

NB: Precipitation forecasts are given for September to May (the main rainy season).

Temperature forecasts are given for January to December.

TABLES SUMMARIZING
SEASONAL TEMPERATURE FORECAST
MAY-JUNE-JULY 2025

Model/multi-model	Morocco	Algeria	Tunisia	Libya	Egypt
ECMWF					
UK Met-Office					
C3S					
WMO LRF-NMME					
IRI					
Synthesis	Probably above normal conditions	Probably above normal conditions	Probably above normal conditions	Probably above normal conditions	Probably above normal conditions
